- Tenmast version 2.01.3
- TimeShareWare
- UtilityPOWERnet by SEDC version 6.0.2
- Virtual Properties

Supported Technologies

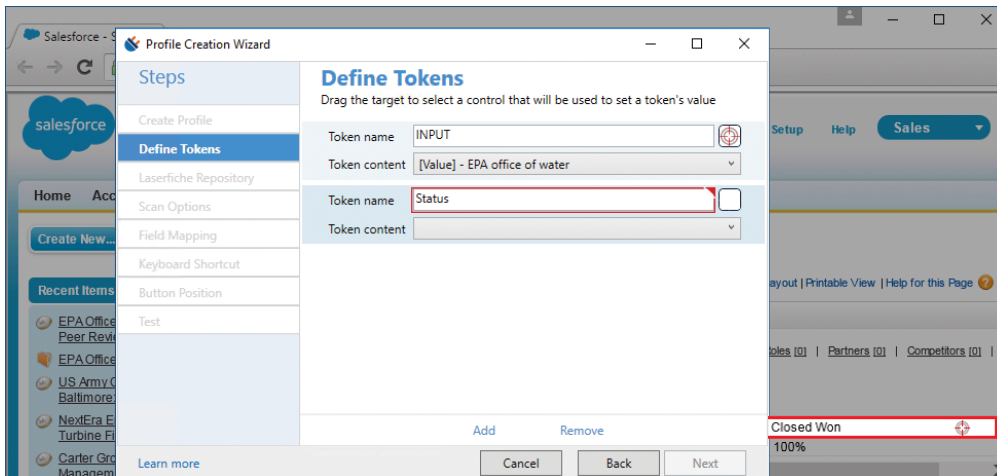

- Adobe® AIR®*
- Delphi
- HTML web applications opened with:
 - Microsoft Internet Explorer® 9+
 - Mozilla® Firefox®
 - Google Chrome™ browser
- Java Swing (JRE versions 6 update 21, 7, or 8)
- Microsoft Foundation Classes (MFC)
- .NET Framework
- Microsoft Silverlight®*
- Visual C++®
- Windows Forms
- Windows Presentation Foundation (WPF)

* Supported if the application is compiled with an accessibility support flag.

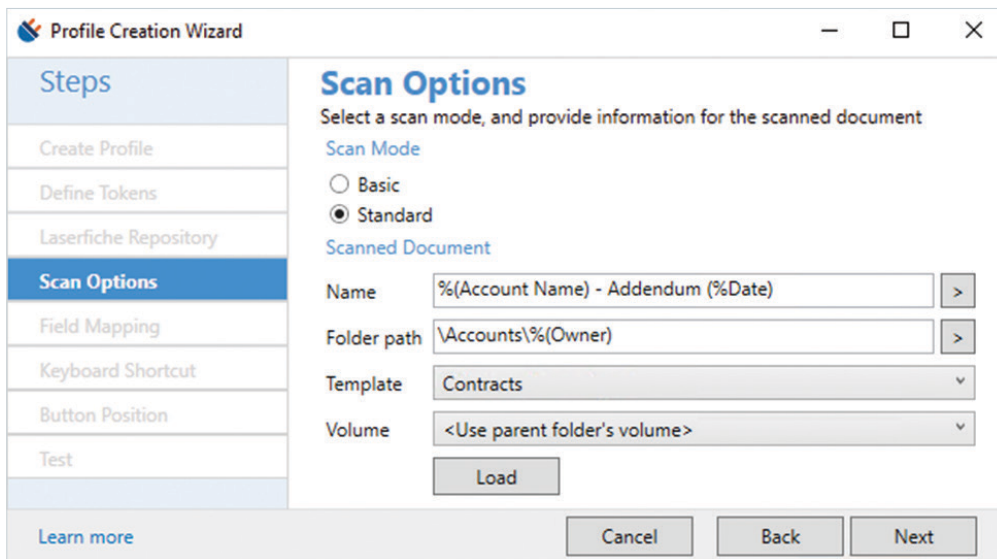

Setting Up Your Integration Takes Only Minutes

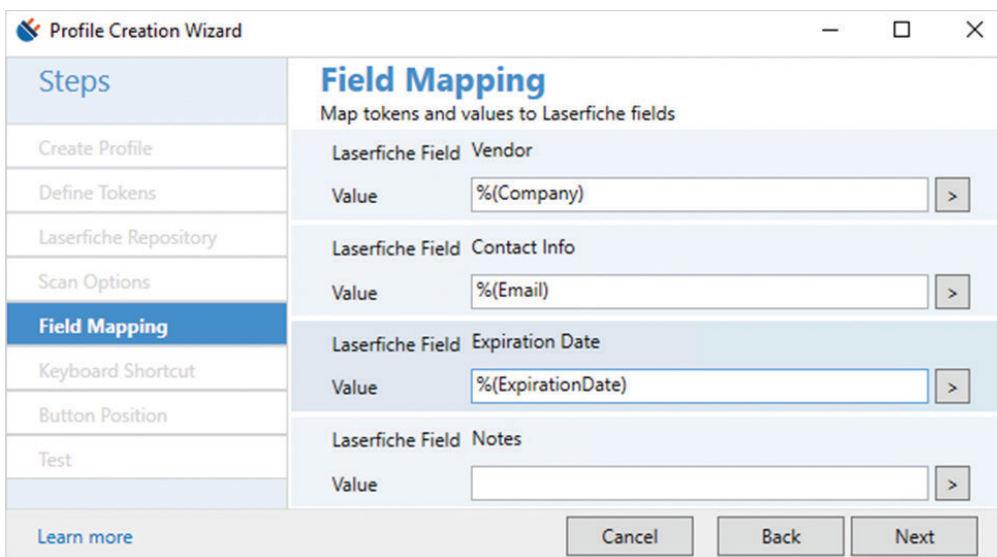

- 1 In the set-up wizard, select the data points that will be used in mapping fields.

- 2 Select your scanning options.

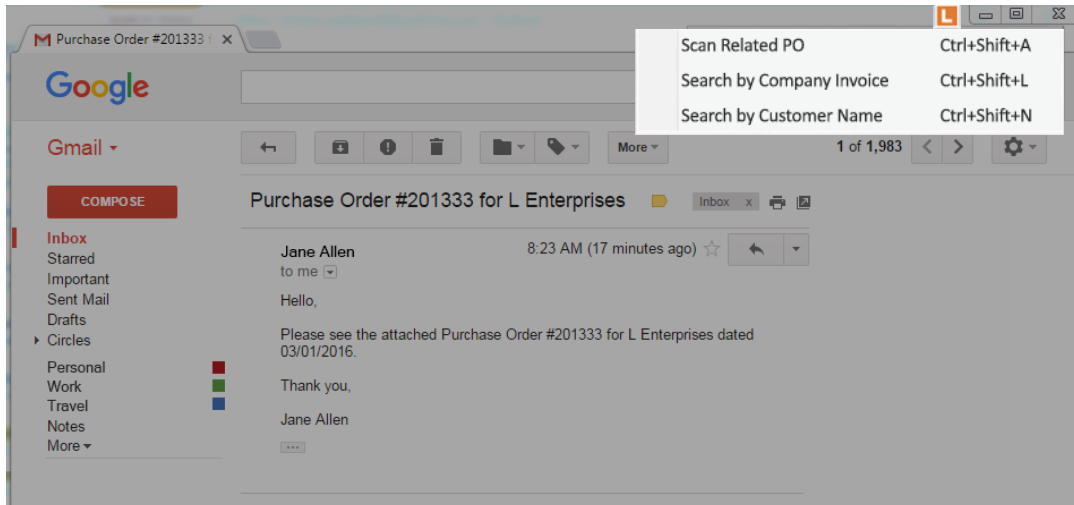

- 3 Map the data points to Laserfiche fields.

Search the Laserfiche Repository from Third-Party Applications

- Perform a search in Laserfiche based on readable elements, such as an account number, customer name or date
- Automatically display the number of search results when the third-party application or webpage is opened
- Eliminate the need to re-type or copy and paste text from one program to another by using information in the primary application to find related documents in Laserfiche
- Use Laserfiche Connector with any third-party application that displays readable text, including web-based or Windows desktop applications

Search the Laserfiche repository directly from a third-party application like Gmail.

Push Content into Laserfiche Directly from Third-Party Applications

- Import documents into the Laserfiche Client or Web Access and dynamically assign file paths, names, templates and field values based on information in a third-party application
- Automatically launch Laserfiche Scanning from any active application, populate metadata and store the new document in the correct folder
- Get information from one application and insert it into another application, such as an electronic form
- Choose whether actions are triggered from a keyboard shortcut, a button embedded in the application or both

“ Laserfiche Connector provides **easy-to-use, wizard-driven, 'no code' application integration**. Laserfiche Connector uses rebanding and screen scraping to identify information to be passed between applications, turned into metadata or searched. Using Laserfiche Connector, organizations can **rapidly create pluggable components that essentially extend the functionality of Laserfiche** with new context-specific 'actions.' ”

Melissa Webster

Program Vice President of Content and Digital Media Technologies, IDC
IDC Insight: Laserfiche 10: Automate, Optimize, and Transform, Doc #US41160716, April 2016
